

Streamline your company's value creation by eliminating siloed data, automating manual processes, and implementing agile governance flows tailored to your specific business and regulatory needs.

DATA: THE FUNDAMENTAL DNA OF EVERY BUSINESS

Your organization is data-driven, the fundamental DNA upon which strategic planning, operational efficiency, and value creation are built.

But so much organizational data - from spreadsheets to legacy backups - lack structure and control making it untrustworthy. According to Gartner, "poor data management costs the average company \$15M annually."

That's why we built Kāsei, a lightweight, secure data integration platform that seamlessly integrates with any enterprise software.

“ With Kāsei, data operations that used to take weeks now take an afternoon ”

—Current Manufacturing Industry Customer

KĀSEI ENHANCES THE VALUE OF YOUR BUSINESS DATA BY PROVIDING A SYSTEMATIC APPROACH TO:

-  Implement data-standardization practices to enhance your master data
-  Apply data governance parameters for any business user and apply policy-based access for any dataset
-  Allow any data user (from data owners to data stewards) to search data with the right contextual dimensions for their role
-  Leverage machine learning and AI to search for parts that may not be well defined and implement QA workflows to review and approve updates
-  Securely integrate with other systems through industry-approved security standards

KĀSEI AT A GLANCE

Improve the quality and speed of business decision making by enabling rich, reliable data to move efficiently across your business. Kāsei operates on structured or unstructured data and transforms data workflows to achieve high-quality data that's necessary for modern business operations.

USE CASES

Data management, governance, and quality are critical for the next generation enterprise, and it's imperative for your company's digital transformation. Kāsei is configured to your specific business needs to help elevate your data infrastructure to the highest possible standard.

Streamline item creation and sourcing workflows

Ditch cumbersome data workflow creation that keep teams waiting. Kāsei streamlines workflows, integrates source and target systems, and automates the process to substantially reduce wait times between teams while producing high-quality sourcing documents fast.

Simplify customer and supplier data maintenance

Create complete and accurate customer and supplier profiles - that include contact, demographic, and financial data - in hours instead of weeks, and keep your teams informed by synchronizing data across all applications. Once data is in the system, customers and suppliers can update their information as needed.

Collect your asset data into a singular hub

Kāsei empowers your organization with an asset data hub to establish consistent asset hierarchies, which are necessary for enabling detailed, accurate asset

reporting, IoT implementation, and preventative maintenance (PM) programs. Asset taxonomies are based on ISO 14224, ISO 15926, or ISO 55000 standards.

Easily convert and migrate applications data

Preparing data for migration? Transferring it to the cloud? Integrating M&A or third-party data? Kāsei does it all, while significantly reducing project timelines from months to weeks and ensuring the data is clean, enriched, complete, and accurate.

Improve MRO Item Search and Taxonomy

Given the huge variety of MRO parts, there are many complex challenges that can impact organizational efficiency. Kāsei uses machine learning and AI to automate important aspects of MRO procurement to search and identify parts that are not well defined, score them for relevance, and create workflows for users to review and approve before updating the master data.

Hamiltonian Systems, Inc.

100 South Commons, Suite 102,
Pittsburgh, PA 15212, U.S.A

We are Hamiltonian Systems.

Founded in Pittsburgh, PA in 2002, Hamiltonian Systems helps organizations gain control over data by implementing supply chain solutions to reduce business risk, remain competitive, and increase profitability.

With Kāsei, a data preparation, governance, curation, and migration platform, and MRO Optimizer, a supply chain optimizer for the MRO industry, customers can optimize large streams of data produced by various assets, and get accurate insights from down-stream data.

At Hamiltonian Systems, our mission is to help companies gain control of their data, have trust in its accuracy, and leverage the insights and opportunities that reliable data affords.
